

Greek Alphabet

Demonstration presentation for usage with dspdfviewer

Benjamin Deseif

11.08.2015

Capital letters

First eight

- ① Alpha, Beta
- ② Gamma, Delta
- ③ Epsilon, Zeta
- ④ Eta, Theta

This is an annotation that belongs to “Gamma, Delta”.

Annotations will always be inserted at the same y position as the text they belong to. Insertion into math mode is also possible (align environments as well as `\[\]`).

Note that in the navigation bar, the long title of this subsection is adjusted in a way that the enumeration is aligned properly. For this purpose, the caption is split at a defined delimiter (which can easily be adjusted via the parameter of the `\indent[Sub[Sub]]Section` command, see lines 31–33). This behavior is currently implemented for subsections, but can easily be extended to sections and subsubsections.

The next slide will show a preview of the following slide in the internal area. This can be done by enclosing the frames in a peek environment (but it cannot be triggered on or of *within* one frame). It works for overlays as well as for more than one frame. You should not make use of notes on slide which has this key.

If you do only want to show the next slide on the right side, you can use `\peeknext` before the frame that should contain the duplication. The macro accepts an optional parameter which should be a positive integer (default 1) that indicates for how long this state should be kept. Set it to `-1` for infinite peeking (which can be stopped with `\stoppeek`). This is demonstrated in the next frame.

Sometimes, you may find it useful to indicate the end of a specific section in your notes. You can use the command `\secEnd` for this, which accepts an optional parameter for a text that can be added to the end mark. This is demonstrated in the next slide (look at the bottom right).

1 Rho, Sigma

Notes can also be bound to overlays.

Capital letters

Last eight

- 1 Rho, Sigma
- 2 Tau, Upsilon

Those overlays can be specified directly at the note command:
`\note<1->{...}`.

Capital letters

Last eight

- 1 Rho, Sigma
- 2 Tau, Upsilon
- 3 Phi, Chi

But it is also possible to include nodes in outer overlay commands.

- 3 Phi, Chi
- 4 Psi, Omega

Just keep in mind that any of the commands that only remove the ink, but not the spacing (such as `\uncover`) will have no effect on notes. Only commands such as `\only` will work as expected.
